Education

•Institute of Engineering and Technology, Lucknow *Sep 2020 - Aug 2024*
Bachelor of Technology in Electronics and Communication Engineering

•Kendriya Vidyalaya, Unnao *Jul 2018 - Jun 2019*
Intermediate, CBSE

Internships

•IBM *Jun 2023- Jul 2023*
Web Development Remote
– Engineered a responsive, interactive frontend website from scratch utilizing **HTML, CSS, and JavaScript** to enhance user experience and accessibility.
– Collaborated effectively within a development team to deliver core web features and meet strict project milestones.

•BSNL *Nov 2022- Dec 2022*
Integrated Telecom/Data Network and Cyber Security Remote
– Analyzed enterprise-level telecom and data networks, evaluating **IP addressing architectures** and national/international **routing protocols**.
– Strengthened practical knowledge of 3+ fields namely **IP address, network security** and **cyber defense strategies**.

Personal Projects

•Study Project *Link*
A full-stack e-learning portal designed to deliver dynamic educational content with a secure, scalable MERN architecture.
– Architected a RESTful API using **Node.js** and **Express.js**, designing complex **MongoDB** schemas via **Mongoose** to efficiently manage interconnected data between students, instructors, and course modules.
– Developed a responsive, component-driven frontend in **React**, integrating **Redux** for centralized state management and **Axios** to optimize asynchronous data fetching and UI rendering.
– Engineered robust security protocols by implementing **JWT-based authorization** and **bcrypt** encryption, while utilizing **Multer** to seamlessly process multipart form data for secure profile media uploads.
– Successfully deployed both frontend**(Vercel)** and backend**(Render)** architectures independently, configuring cross-origin resource sharing**(CORS)** and production environment variables to ensure seamless, secure cloud data flow.

•Auth App *Link*
A robust backend system designed to securely manage user registration, authentication, and route authorization.
– Architected a scalable backend service from scratch to handle **user identity management**.
– Built the RESTful API using **Node.js and Express.js**, integrating a database to efficiently process user credentials.
– Secured data by implementing **bcrypt** for password hashing and **JWT** for seamless, stateless authorization.
– Successfully delivered a reliable authentication module that prevents unauthorized endpoint access.

•Online Compiler *Link*
An online code execution environment facilitating real-time compilation for 3 programming languages.
– Engineered a scalable Django web application to securely process and execute **C, C++, and Python code**.
– Integrated a **browser-based code editor** to capture user input and deliver accurate, real-time compilation outputs.
– Containerized the application using **Docker** to ensure isolated and seamless cross-platform deployment.

Technical Skills

Languages: C++, Python, JS, SQL
Frontend: HTML, CSS, React
Backend: Node.js, Express.js, Django
Databases: MongoDB, MySQL, SQLite
DevOps And Tools: VS Code, Git/GitHub, Docker, IDEs

Positions of Responsibility

•Secretary, Hostel Maintenance and Mess Committee *Jul 2023 - Jun 24*

•Ankuran 2022 (Technical Fest of Electronics Department), Management Team *Oct 2022*

•Muskan 2021-Clothes Distribution Event Parmarth(Social Club of IET), Distribution Team *Dec 2021*

Achievements

•Solved 600+ Coding Problems on Geeksforgeeks, Leetcode, Codeforces, etc.

•Led a project for successful admission of a 10+ of underprivileged children from slums into private schools through the Right to Education (RTE) initiative.
